IC Memo
Cable One, Inc. (CABO)

Recommendation & Investment Thesis

BUY Cable One's Term Loan B4 due 5/3/28 at 87.00 (S+200bps, ~14.6% YTW). The recommendation does not require an operating turnaround. The forecast assumes continued EBITDA decline through 2029E, while Cable One remains strongly free cash flow positive, providing meaningful liquidity and financial flexibility ahead of the 2028 maturity complex. B4's position in the maturity structure gives CABO a strong incentive to address the loan ahead of the broader 2028 refinancing event.

Cable One is a single segment rural and suburban broadband operator transitioning from legacy video toward data, with continued pressure from fixed wireless and fiber competition and weaker broadband subscriber trends. The credit is further complicated by the pending MBI acquisition. GTCR exercised its put right, requiring CABO to acquire the remaining ~55% of MBI for ~$480mm, with closing expected in October 2026. MBI also has ~$920mm of existing term debt that is currently structurally separate from CABO and not guaranteed by CABO. MBI's assets, liabilities and operating results will be consolidated upon closing, while the final transaction financing and treatment of MBI's existing debt have not yet been finalized.

The key underwriting question is whether Cable One can generate enough cash and preserve enough financial flexibility to address B4 ahead of the 2028 maturity complex. The company currently has $550mm drawn on its $1.25bn revolver and ~$2.9bn of standalone net debt, with meaningful covenant headroom today. Net First Lien leverage stands at ~2.94x against a 4.25x maximum, and net Total leverage stands at ~4.15x against a 5.00x maximum. MBI materially reduces that cushion. Under the illustrative Base Funding Case, pro forma First Lien leverage increases to ~4.08x and Total leverage to ~5.08x, leaving ~0.17x and 0.42x of headroom, respectively. Total leverage passes only because of the elected 5.50x covenant step up for acquisitions. Without it, Total leverage would breach the standard 5.00x maximum. The 4.25x First Lien test carries no step up under any funding mix, leaving it the tighter constraint with limited room for further operating underperformance. Final covenant headroom will depend on the ultimate transaction financing.

The 2028 maturity wall remains the primary risk. The revolver commitment expires 2/22/28, the $345mm convertible notes mature 3/15/28, and $696mm of B4 matures 5/3/28, all within ~10 weeks of each other. B4 also sits at the center of the springing maturity provisions affecting debt otherwise scheduled to remain outstanding beyond 2028. If more than $150mm of applicable B4 or qualifying B4 refinancing debt remains outstanding, B2 and B3's October 2029 maturities can spring forward to May 2028, and the revolver contains a related springing provision tied to B4. Simply refinancing B4 with another short dated instrument does not necessarily solve the issue. CABO therefore has a strong incentive to repay B4 or refinance it with sufficiently long dated debt rather than allow additional maturities to be pulled into an already concentrated 2028 refinancing window.

Recovery provides additional downside support but is not the reason to own B4. First Lien claims average ~88% recovery across the Recovery tab's Current Draw stress grid, roughly in line with B4's current purchase price of 87. Recovery falls materially if the revolver is fully drawn, averaging ~70%, so the analysis does not support relying on collateral value alone. The 88% figure reflects the revolver's current $550mm draw, pre-funding. Any revolver-funded portion of the MBI purchase pushes the actual draw toward the Fully Drawn case, and post-close recovery support will depend on the final funding structure. MBI's ~$920mm of existing debt is currently structurally separate from CABO and does not share in CABO's First Lien collateral. Upon consummation of the MBI transaction, debt remaining under the MBI Credit Agreement is treated as First Lien Indebtedness for purposes of CABO's covenant calculations, materially reducing covenant headroom. The ultimate post-close treatment of MBI's existing debt remains unresolved.

At 87, B4 offers ~14.6% YTW. B2 and B3 offer ~12.1% to 12.2% despite remaining exposed to CABO through their scheduled October 2029 maturities if B4 is successfully addressed. The higher yield is attractive, but it is not the basis for the recommendation. The forecast shows CABO remaining strongly free cash flow positive despite continued EBITDA decline, providing financial flexibility ahead of the 2028 maturity complex without assuming an operating recovery. MBI adds leverage and materially reduces that flexibility, but does not change the underlying cash generation of the standalone business. B4 also cannot simply be ignored until maturity. Its springing provisions can pull B2, B3 and the revolver into the 2028 refinancing window, giving CABO a strong incentive to address B4 through repayment or sufficiently long dated refinancing. At 87, the market is pricing substantial refinancing risk despite continued cash generation and a capital structure that makes addressing B4 a priority. The recommendation is therefore based on CABO's cash generation and strong incentive to address B4 ahead of 2028, not on an improvement in the underlying business.

Business Overview

Cable One, Inc. is a broadband and video provider operating primarily in mid-sized and rural markets under the Sparklight brand, with a single reportable segment. Revenue is increasingly concentrated in residential and business data, while legacy video and voice remain in structural decline as customers migrate to data-only and streaming alternatives. The network is primarily hybrid fiber-coax (HFC), with fiber-to-the-premises (FTTP) deployed in select competitive markets representing ~10% of markets as of the Q4'25 call. Essentially all of the network is gigabit-capable today, with the vast majority of markets expected to support multi-gig speeds by year-end 2026 per the Q2'26 call. Management has characterized these upgrades as capital-efficient investments in the existing HFC plant rather than a new capital program. Peak-hour network utilization remains at or below 20%, against ~835GB of average monthly usage per customer as of Q4'25, providing meaningful capacity headroom under current usage levels.

Competitive intensity remains elevated. ~80% of the footprint has at least one fixed wireless access (FWA) competitor as of the Q1'26 call, while fiber overbuild remains active in portions of the footprint. AT&T's DSL decommissioning represents an additional swing factor for future fiber and FWA buildout. Residential data subscribers have declined for multiple consecutive quarters, although management reported sequential improvement in both connect activity and disconnects into Q1'26 and Q2'26. The network therefore does not appear to face an immediate capacity constraint, but competitive pressure and continued subscriber losses remain the central operating challenges.

CABO has historically owned ~45% of Mega Broadband Investments (MBI), a fiber-focused broadband platform accounted for under the equity method. GTCR, which owns the remaining ~55%, exercised its contractual put right, requiring CABO to acquire that stake for ~$480mm, with closing expected in October 2026. Upon closing, CABO will move from equity method accounting to full consolidation of MBI's assets, liabilities, and operating results. MBI currently has ~$920mm of existing term debt, expected to be ~$900mm at closing, separate from the ~$480mm purchase consideration. The final funding mix for the acquisition and treatment of MBI's existing debt have not yet been finalized.

Investment Risks and Strengths

Investment Strengths

- Forecast assumes continued EBITDA pressure while CABO remains strongly FCF positive, so the thesis does not require an operating recovery
- B4-linked springing provisions can pull B2/B3 and the Revolver into 2028, giving CABO a strong incentive to address B4. B4 offers ~14.6% YTW at 87.00 versus ~12.1–12.2% for B2/B3
- Current Draw scenarios produce ~88% average First Lien recovery versus B4's current price of 87, pre-funding. Post-close recovery support depends on the final MBI funding structure
- Standalone First Lien / Total Net Leverage of ~2.94x / ~4.15x remains inside 4.25x / 5.00x limits. Illustrative PF MBI leverage rises to ~4.08x / ~5.08x assuming the permitted step-up
- Revolver and Term Loans are pari passu First Lien claims under the current structure
- MBI debt is currently structurally separate and non-recourse to CABO, but counts as First Lien Indebtedness for CABO covenant calculations upon consummation of the MBI transaction
- CABO's network is essentially all gigabit-capable and expected to be predominantly multi-gig by YE26 using existing HFC infrastructure
- Peak network utilization remains at or below ~20% despite ~835GB average monthly usage per customer
- The MBI Term Loan Exchange Offer has not been consummated, and CABO disclosed it is considering not consummating the proposed FLFO/FLSO exchange

Investment Risks

- 2028 refinancing is the key risk, with the Revolver expiring in February, $345mm of Converts maturing in March and $696mm of B4 maturing in May. Failure to sufficiently address B4 could pull B2/B3 and the Revolver into the same window
- MBI requires ~$480mm of purchase consideration and has ~$920mm of existing debt, materially increasing leverage while the final funding structure and treatment of MBI debt remain unresolved
- Residential broadband subscribers and EBITDA remain under pressure. Downside case Total Net Leverage approaches ~4.9x by 2029E, near the 5.00x limit
- Fiber overbuild and FWA remain meaningful competitive risks, though existing HFC capability limits near-term technology-driven capex needs
- Fully Drawn Revolver stress reduces average First Lien recovery to ~70% versus ~88% under Current Draw
- The proposed MBI FLFO/FLSO exchange highlights LME risk, although no transaction targeting CABO's existing Term Loans has been consummated
- Final MBI financing or CABO credit support could change leverage, lien priority and recovery
- Recovery remains valuation-sensitive, though the 3.5x–4.5x range shows meaningful First Lien value without relying on MBI equity value

Term Sheet Summary

Credit Facility

Borrower:	Cable One, Inc.
Credit Facility:	$1.25B Revolving Credit Facility, Term Loan B-2, Term Loan B-3, Term Loan B-4
Guarantors:	Borrower plus material wholly-owned domestic restricted subsidiaries. MBI subsidiaries excluded while MBI Credit Agreement in effect (Amdt. No. 2, through 11/12/27)
Issue Date:	2/22/2023
Maturity Date:	RCF: 2/22/2028, springing maturity applies. B4: 5/3/2028. B2/B3: 10/30/2029, springing maturity applies if B4 or qualifying refinancing debt exceeds $150mm.
Applicable Margin:	200 bps
CSA:	11 bps
Financial Covenants:	Max 5.00x Total Net Leverage Ratio (step-up to 5.50x for up to three permitted acquisition periods), max 4.25x First Lien Net Leverage Ratio, tested quarterly
Floor:	-
Term Loan Amortization:	TLB-2 $0.625mm/qtr, TLB-3 $1.936mm/qtr, TLB-4 $2.000mm/qtr, remaining balances due at maturity
Call Protection:	None on TLB-2/3. TLB-4 1.00% soft call expired 4/7/25. All term loans now prepayable at par

Re-Rating Triggers

BUY maintained at current levels. Reassess the recommendation upon any of the following:

- CABO fails to demonstrate a credible path to address B4 ahead of the 2028 maturity complex
- MBI financing results in materially greater leverage, reduced liquidity or weaker B4 creditor protection than currently contemplated
- FCF deteriorates materially below forecast, reducing financial flexibility ahead of the 2028 refinancing
